

Change your desk lamp to a compact fluorescent bulb and help conserve energy!

A number of people use desk lamps as task lighting. Using desk lamps provides lighting where it is needed most and, especially as overall lighting needs increase in the winter months, helps reduce the need to have higher general area lighting levels.

Many of the City staff using desk lamps have asked if the City can provide a compact fluorescent replacement for their incandescent bulb. In answer to these requests, the Facility Management Division has made a bulk purchase of compact fluorescent bulbs that produce the equivalent light of a 60 watt incandescent bulb. These bulbs are available for use in City facilities (not for personal use) upon request, first come, first served. Just e-mail Lynne Eichner Kelley, the division's Energy Analyst, with the wattage of your current bulb and your location and you will receive your energy efficient replacement in the pony.

The Facility Management Division is able to provide compact fluorescent replacement bulbs under an EWEB energy rebate program. The replacement program will be limited to the first 50 people requesting replacements.
